Position Title: Controls Engineer

Department: Engineering

Position Description

TruNorth Automation is looking to increase growth in its engineering department. Ideal candidate demonstrates a strong balance between hands-on practical experience and aptitude for software development and machine debug of custom automation machines primarily in the life science and med device industry. You are joining a driven, and ambitious team with decades of experience in delivering sophisticated automation equipment.

You Will Succeed if You:

- Are self-driven and energetic with a learner mindset motivated to meaningfully contribute from day one, and be part of building the company's experience and culture
- Have strong attention to detail and want to balance programming skills with hands-on robotic assembly and automation
- Desire to be a part of a growing company and learn all aspects necessary to successfully complete sophisticated automation projects
- Seek out leadership roles within teams, assignments, and other opportunities within the Company

Qualifications

- Bachelor's degree in mechanical, electrical, or computer engineering or related field with minimum GPA of 3.4
- Practical experience within an internship, co-op, or team related to control systems
- Hold effective interpersonal and communication skills
- Competent in MS Office: excel, word, power point
- Excellent analytical and problem-solving skills
- Experience with software development, motion control, electrical design, machine vision, and/or robotics a plus
- Able to travel by air or car (estimated 10% max.)
- US citizen or authorization to work permanently for any Employer in the United States
